## An exceptional digital format for SD Broadcasters

### Designed for reliable high density recording

With ultra-fine metal particles and an advanced calendaring system, MPEG IMX tape provides exceptional quality with a C/N ratio of 40dB. A separate magnetic particle treatment improves adhesion between the binder and particles by 30%, reducing dropouts and increasing durability.

### Advanced features for SD broadcasting

MPEG IMX is perfect for broadcast infrastructures with open compression at data rates of up to a rapid 50Mbps. The convenient double recording time indicator enables professional camera operators to quickly verify time remaining on the tape in both 525i and 625i modes for even more flexibility while filming.
